

Swopper Classic

Productivity starts where standing long hours stops

Swopper is a well researched, German engineered ergonomic office stool.

It's designed to assist the body's natural motion pattern, particularly when sitting, through its flexibility in 3 dimensions. All this strengthens your back, increases performance and helps to keep you fit and healthy.

Swopper Chairs are endorsed worldwide by architects, designers, ergonomists and health professionals alike, and the manufacturer Aeris holds several worldwide patents. Swopper has also won numerous awards from renowned German and international institutes for its design, function and engineering.

The swopper was the first seat worldwide to bring vertical movement as a third dimension in sitting. The fact that this has won it lots of prizes and awards is great. But what pleases us even more is that it makes so many people fitter and happier.

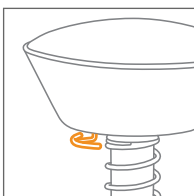

Swopper chair benefits

- Variable sitting allows for longer and more productive work
- Simple and intuitive handling
- Strengthened core as a result of being in motion
- Significant international design awards give you peace of mind
- Designed in Germany by Aeris, the inventors of the swopper chair
