

Equip Screens

Equip Office Furniture has a comprehensive range of office screens to suit your every requirement. Office Screens come in a wide variety of styles and finishes with some of the more commonly used types listed below.

Acoustic Screens: When sound deadening is required there is a solution at hand.

Desk Mounted Screens: This type of screen can be mounted on an existing desk to provide some privacy or simply to hide the mess on the desk. Screens can be covered in a wide variety of fabric, can be any size and height and can be solid or see through Just tell us what you want and we will get a price for you.

Fixed Screens: Normally used to separate work areas where power and data cabling is required. These screens can carry ducted cables at floor or desk level either from a wall outlet or from the ceiling if the workstations are free standing in the middle of a room.

Screens can be manufactured to any desired height, can be covered in a wide range of fabric or other material to suit the decor and glass may be incorporated above desk height to allow supervisors to see the whole room.

Free Standing Screens: This type of screen may be a melamine finish to match your desking or may be covered in a fabric of your choice. Screens can be pinable on one or both sides to serve a dual purpose i.e. screen / pinboard. Free standing screens can be quite portable to allow for changes in configuration without the need to unbolt, unscrew, undo, dismantle or replace. Simply move them to the new position.

Screen Hung Workstations: Desk tops can be manufactured to hang from the screens to improve the overall efficiency of the workspace. Configurations and finishes are limited only by your imagination. Power and data cabling can be incorporated at floor or desk level to suit your needs.

A wide range of screen hung accessories are available e.g. filing trays, flipper boxes, book shelves, pen trays etc.

Screen Walls: Normally floor to ceiling, these screens are more like a permanent partition although they can be moved should the need arise. This is a decided advantage over traditional plaster walls which tend to be immovable.

These screens come in a wide variety of finishes including full or half glass, can incorporate glass or solid doors, can carry power and data cables and can be removed easily when you decide to vacate the space. This is a decided advantage over plaster walls which can cost more to remove than install.

Another consideration is the mess factor. This is particularly important if you are renovating an existing work space. Plaster finishing can create mounds of dust to filter through your computers etc. and need to be painted on site creating fumes and disruption to your business
